Gasket Repair Kit #185120 (GD-124 B&G Compatible)

Gasket Repair Kit

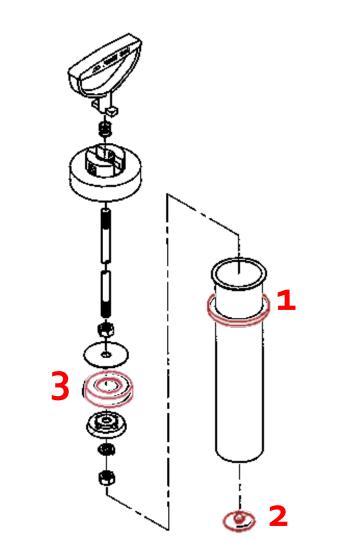

Pump Mechanism

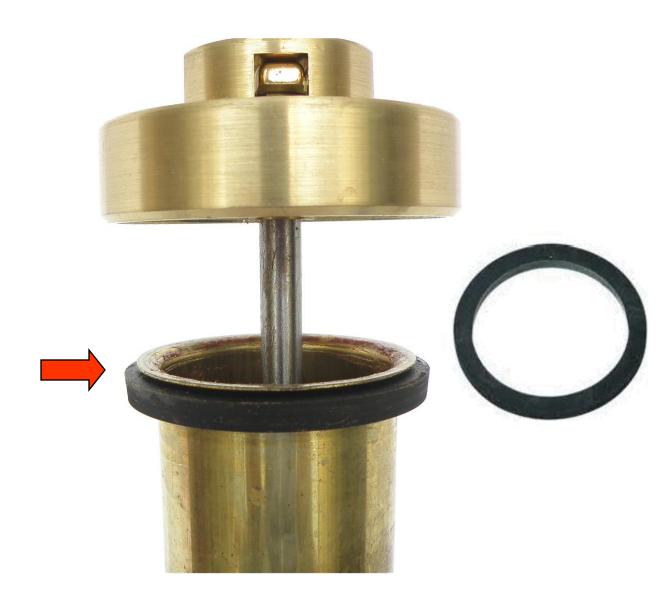

1 Pump gasket holds air pressure in the tank.

2 Check valve seals bottom of pump tube.

3 Plunger cup forces air through the pump tube into the tank.

Pump Tube Gasket

Inspect the pump tube gasket when tank pressure frequently drops after pumping. Replace gasket when swollen or cracked.

Plunger Cup

Replace plunger cup every 2 years and install a new pressure plate with new cup.

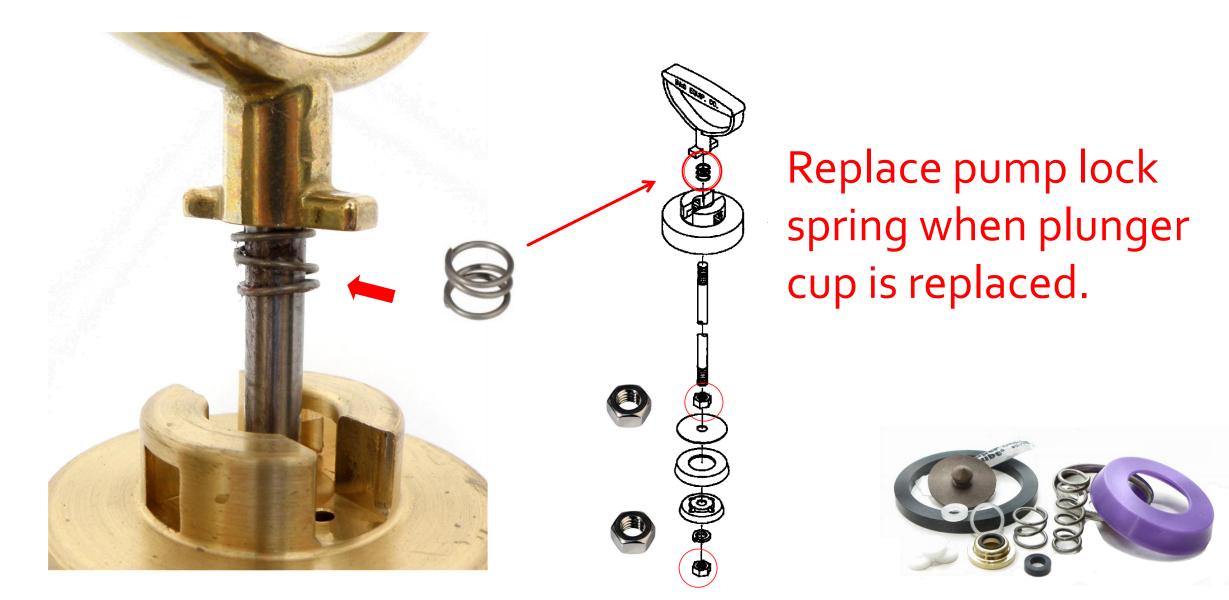

Super Synthetic Grass

Pump Mechanism

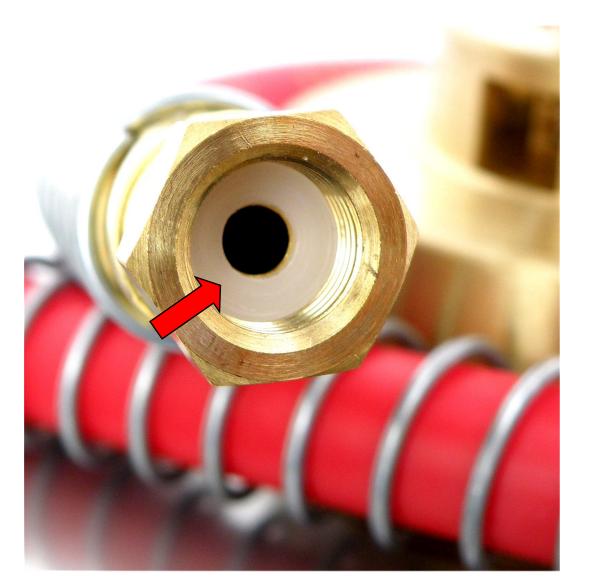

Clean holes in pump tube only with **nylon** brush. Replace check valve when plunger tube fills with liquid.

Pump Lock Spring

Hose Gasket

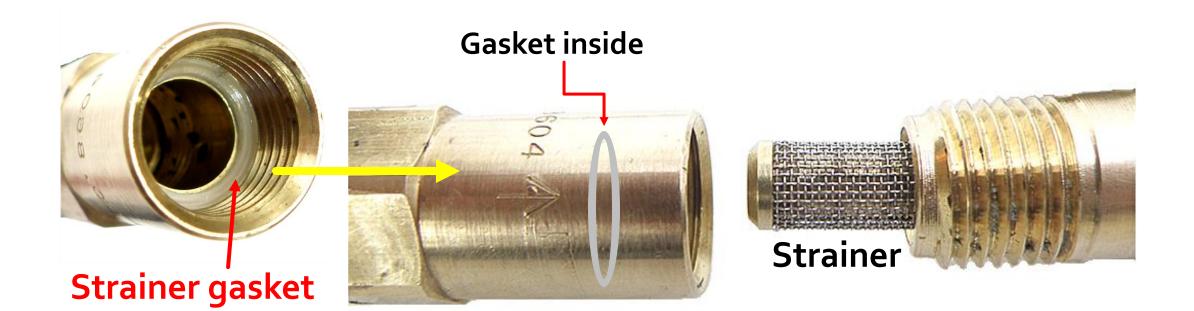

When hose is attached too tight the gasket opening closes and flow of liquid is blocked.

Damaged gasket must be replaced. Nylon gasket will not return to original shape.

Strainer Gasket

Insert gasket into brass hose fitting.

Nozzle Gasket

Gasket seals orifice openings in nozzle. Nozzle leaks without this gasket.

Soft Seat Gasket

Gasket seals liquid flow to nozzle. Nozzle leaks when this gasket is dirty or worn.

Flat side toward nozzle

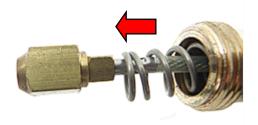

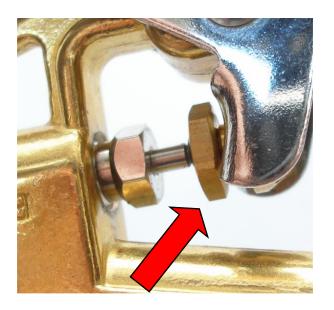

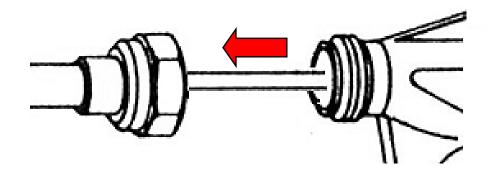

Replacing Valve Spring

Remove valve trigger and disconnect cable. Disconnect extension from valve.

Pull short length of cable from valve to extend cable at nozzle.

Valve Spring

Unscrew / remove seat stem and nut to replace old valve spring.

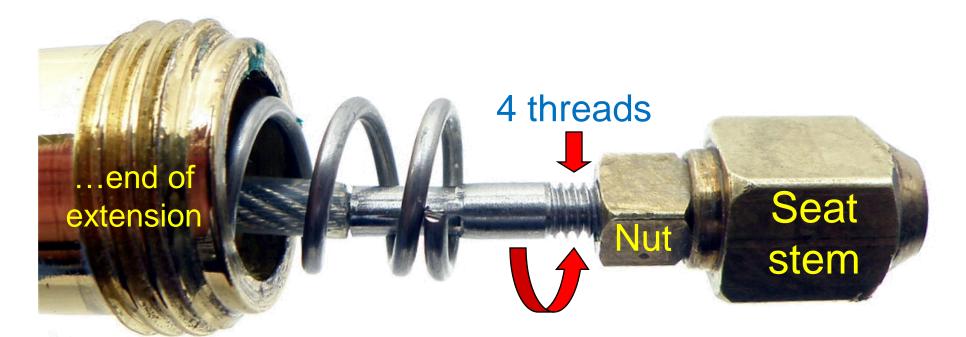

Valve Spring

Unscrew / remove seat stem and nut to replace old valve spring.

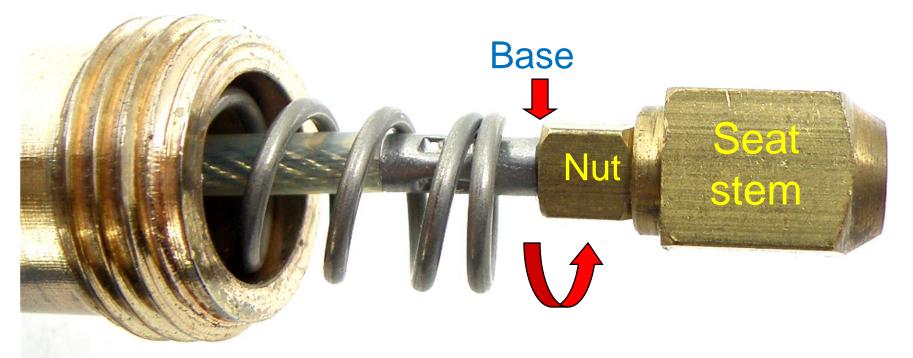

Valve Spring - Finish (9 in. Extension)

Screw seat stem nut to 4 threads from base of cable, then tighten seat stem against nut.

Valve Spring - Finish (18 in. Extension)

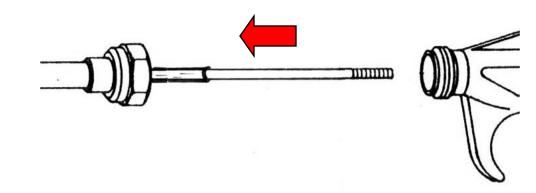

Screw seat stem nut to base of cable, then tighten seat stem against nut.

Replace Packing Washers

Disassemble the valve, remove Packing nut.

Pull cable from the valve and set aside the extension for re-assembly.

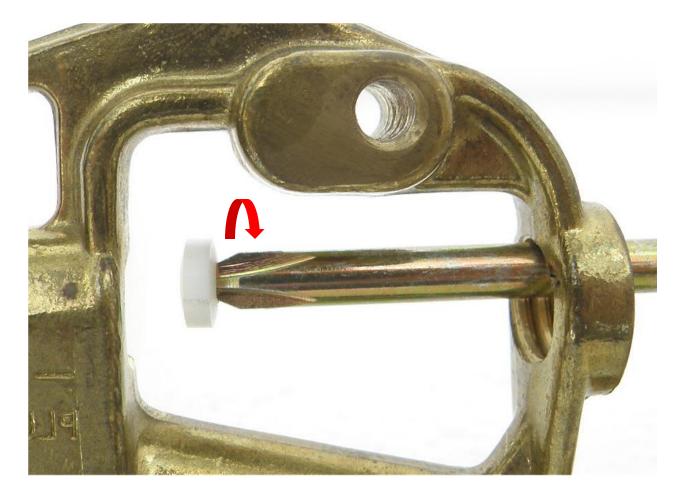

Remove Old Washers

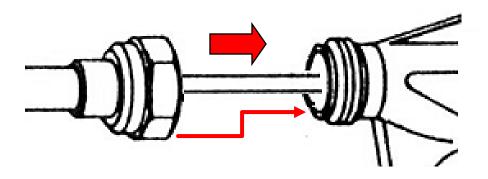

Use flat or Phillips-head screw drier to remove old washers from valve.

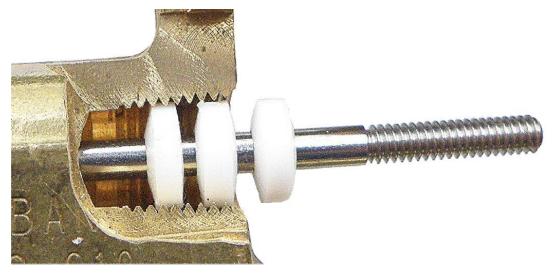

Replace Packing Washers

Push cable back into valve, re-attach extension to the valve body.

Place new packing washers onto the end of the cable.

Cut-away view

Cables and Washers

Variability in diameter of cables and center hole of packing washer results in difficulty placing washers on the cable.

Must be screwed () onto cable

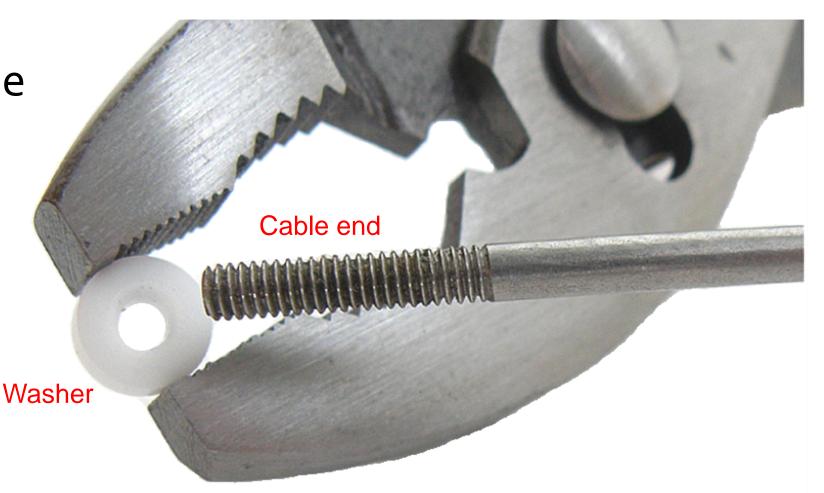

Cable

end

Packing Washer Hole

Enlarge washer hole by moving \longleftarrow end of cable in the hole. Grip washer firmly with pliers.

Packing Washers - Finish

Screw the Packing nut into the valve body only to the top of the threads.
